

NATURAL FIBRE HAND-RAILS

*" The new rail design
is an amazing creation
from GYMNOVA.
They are the best bars
I've used for holding
chalk"
Becky Downie*

Available in two versions (diam. 39.2 and 37.5 mm), these new hand-rails exhibit all the dynamic properties of our traditional models with an extended lifespan thanks to its new natural fibre finish

This material, which is more malleable than wood, allows for a more homogeneous coating, which **increases the hand-rail's lifespan.**

Gymnasts will almost immediately adjust to these hand-rails. **The texture provides an efficient grip** with less time required to prepare the bar, as these hand-rails need much less chalk during use.

The hand-rails show **no wear** even after several routines and therefore provide better protection for the gymnasts' hands, thus enabling high quality routines. **They can be safely cleaned with water.**

Technical specifications

Round fiberglass hand-rails with a natural fibre finish.

Ref. 3265

Competition hand-rail

- Compliant with FIG standard
- Diameter: 39.2 mm
- Color: natural fibre
- Dynamic behavior identical to Ref. 3262
- Sold Individually

Note: Available on "RIO" competition asymmetric bars:

- Ref. 3240, standard cable system (floor space: 5.50 x 4 m) - **FIG-Approved**
- Ref. 3245, short cable system (floor area: 4 x 2.10 m)

Ref. 3268

Training hand-rail

With a smaller diameter, it allows a better hold for smaller builds and helps to learn the basics before moving on to the competition bar.

Its pink color makes it easier to pick out when learning the first flight elements.

- Diameter: 37.5 mm
- Color: pink
- Dynamic behavior identical to Ref. 3260
- Compatible with all GYMNOVA asymmetric and high bars
- Sold Individually
