

RAISES LANDING PIT

REF. 7097

This type of pit is perfect for temporary gyms or gyms that might be dismantled because this method avoids digging into the ground. The level of comfort and flexibility it offers is identical to standard pits, and it is designed to ensure a uniform landing surface.

This prefabricated concept means the pit can be installed quickly and easily by just 2 people in a single day.

TECHNICAL FEATURES

1- 200 mm thick-duality mat, including a 50 mm «comfort» top layer. This very stretchy and strong dual-density foam creates a soft landing and ensures a long-lasting landing surface. M1 fire-rated stretch jersey cover fabric.

2- Lower blocks: 600 mm thick cross-groove foam comprising a variety of densities to adapt to users in different landing zones. This type of foam ensures good air circulation and so optimal shock absorption.

- The apparatus are installed on a raised platform so that they are the same height.
